REPORTING FOR WEEK ENDING November 20, 2005 CROP YEAR

RELEASED: November 21, 3PM - There were 6 days suitable for field work. Soil moisture supplies were 21% very short, 35% short, 41% adequate, and 3% surplus.

CROPS: Warm, dry conditions allowed fall harvest and winter wheat planting activities to be completed well ahead of normal. Producers also had the opportunity to get a jump start on preparing the ground for spring planting. Rains this week helped the winter wheat germination, emergence, and overall crop development. The first hard freeze for many counties occurred nearly 30 days later than average.

LIVESTOCK: Livestock were reported to be in fair condition. Cattlemen continued to worm and vaccinate their herds. Most hay had been cut and was being fed to cattle along with supplements. Winter pastures were being fertilized. Rains received helped with cool season forages, but rain is still needed.

Progress %					Condition %
